DETAILED DESCRIPTION - A composition, comprises an efficient amount of a first polymer (P) of weight average molecular weight less than

(a) a polymeric skeleton having repeating hydrocarbon units

units, in a make-up composition (C) comprising in physiologically acceptable medium containing a fatty phase as an agent for increasing

(b) at least one 6-120 C pendant fatty chain and/or optionally functionalized terminal fatty chain, which is bonded to the hydrocarbon

containing at least one heteroatom; and optionally

the speed of applying make-up to keratin materials and/or for increasing adhesion/firmness of make-up.

An INDEPENDENT CLAIM is also included for a process for improving the adherence/firmness of a cosmetic make-up by using polymer (P in a fatty phase).

USE - The composition is used in cosmetic hair products such as mascara eyeliner and eyelashes

ADVANTAGE - Rapid, efficient and long-lasting application to hairs especially eye lashes
